## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

**Claims 1, 3-7, 10-16, and 18-20 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Wang (US 6,175,922).**

Wang discloses an electronic transaction system that teaches all the limitations of the claimed invention. For example, Wang discloses a method for approving transactions that involves sending a transaction authorization requests over a bi-directional link between a vendor server and a portable electronic authorization device such as a cellular phone. A user with an Internet-enabled mobile device such as a cellular phone can contact a merchant's Internet server through a wireless gateway implemented using a short range wireless communication capability such as Bluetooth, and the merchant server can transmit encrypted messages to the user's cellular phone in response. The user's mobile station can have pre-installed software for performing electronic transaction verification, or the merchant server can download a transaction

program to the mobile station to enable the electronic transaction. The user can generate and send to the remote server user identification and authentication data, such as the user's digital signature, and authorization of the transaction. In response, the merchant site can download authorization confirmation and any electronic tokens required for accessing the service, such as an electronic ticket, to the user's mobile device for future service authorization (see at least Fig. 3A, Fig. 5B, Fig. 7A, Fig. 9A, col. 14 line 63 – col. 15 line 47, col. 16, lines 7 – col. 17 line 19, col. 18, line 33 – col. 19 line 52).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 2, 8, 9, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang in view of Ladd et al. (US 6,269,336).**

Wang substantially discloses the invention, including entering PIN numbers via a keypad by a user of an ATM for authentication by comparing the PIN with a PIN stored at a remote computer. Wang fails to teach a user entering a PIN into a mobile station. Ladd teaches a mobile station such as a mobile phone, PDA or pager, that prompts a user to enter a unique PIN for user identification. It would have been obvious to one having ordinary skill in the art at the time of the invention to combine Wang's electronic

transaction system with the teaching of Ladd regarding prompting a user to enter a PIN at a mobile station. Doing so would provide a simple means to identify a user and prevent unauthorized use of a mobile station, thus increasing user security.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wang (US 5,917,913) discloses portable electronic authorization devices.
